Kubernetes Summary Task

Please use your last two homework assignments:

- The YNET news
- The Bitcoin app

1- Dockerize your YNET and Bitcoin applications
2- Create Kubernetes manifests (Deployment and service)
3- Deploy on your minikube
4- Deploy/Enable Ingress Controller on your cluster
5- Create an ingress that directs the traffic to the correct service:

http://…/ynet → ynet service
http://…/bitcoin → bitcoin service

Good Luck …
